Smart Funds

Smart Cautious Fund (£ GBP)

31 May 2025

Capital at risk

The value of investments and the income from them can fall as well as rise and you may not receive back the original amount invested.

Key information

Reporting date: 31 May 2025

Launch date: 07 January 2022

Fund size: £8.2M

Recommended minimum holding period: 5 years - This Fund may not be appropriate for investors who plan to withdraw their money before the end of the recommended minimum holding period.

Ongoing Charges Figure (OCF): 0.29% for the £ GBP class. This includes the ongoing costs of the fund, such as the Investment Management (IM) fee and daily operational expenses.

UK Transaction costs: 0.06% – this represents the implicit and explicit costs that have been incurred due to trading within the fund. Calculated based on the FCA methodology.

Comparators: UK CPI + 1.5% and ARC Sterling Balanced Asset PCI - The comparators shown are to help you understand your portfolio's performance relative to a benchmark portfolio with similar risk.

Fund yield: This share class does not distribute

Dividend dates: This share class does not distribute

Performance calculations: All performance is sourced from Morningstar as of the reporting date, they do not include any tax but does include the OCF. If there are any dividends it is assumed they are reinvested.

For the avoidance of doubt, if you decide to invest, you will be buying units/shares in the Fund and will not be investing directly in the underlying assets of the Fund.

Smart Funds

The Smart funds combine active asset allocation decisions with low cost investments such as Exchange Traded Funds (ETFs) to deliver our best investment thinking in a cost-effective and tax efficient structure. With five different strategies, each fund is linked to our sophisticated risk profiling process to ensure investors have exposure to the optimal blend of available asset classes. Drawing on the expertise of our extensive internal research resource and overseen by a dedicated team of the firm's most senior investment professionals, each fund is dynamically re-balanced to meet a range of clearly articulated inflation plus return targets.

Investment objectives of the fund

The fund's objective is to provide a moderate level of capital growth in real terms by investing primarily in exchange traded products and tracker funds to gain exposure to the investment market.

It has a sizeable allocation to equities, but also has exposure to fixed income and may have exposure to other non-equity asset classes.

Cumulative performance (%)

Cumulative performance (total / aggregated return over the period) can often be a useful indication as to what an investment has achieved in nominal terms (i.e., not accounting for inflation) over a defined period. The since launch performance data covers the period from Launch Date to the Reporting Date (detailed within the Key Information section).

The chart shown below aims to inform you how the portfolio has performed since inception against the appropriate comparators and represents the portfolio's ongoing performance. The comparators used are for comparison purposes only to help you understand the performance of your portfolio relative to an appropriate benchmark portfolio with similar levels of risk.

All figures shown refer to the past and past performance is not a reliable indicator of future results.

[illegible]

Key Risks. Continued

Derivative counterparty risk: The Fund can use over the counter (OTC) derivatives, these are derivatives not traded openly on an exchange and instead are traded privately directly between a buyer and seller, who are referred to as counterparties. These derivatives are used to reduce the impact of holding investments in other currencies (hedging). There is a risk that, one of the counterparties will not be able to pay the money owed to the Fund in the course of carrying out an OTC derivatives trade. In this event your return could be reduced.

Credit risk: The Fund can invest directly in bonds, these carry the risk that the company, country or other entity issuing the bond will be unable to make the interest or any other payments it has committed to. This risk is higher for lower quality, non-investment grade and unrated bonds. However, these bonds typically provide a greater return than lower risk bonds.

Emerging market risk: The Fund can be exposed to emerging markets which Compared to more established economies, investments in emerging markets may be subject to greater volatility. Under certain market conditions assets may be difficult to sell.

Foreign-exchange risk: When investments are made in overseas securities, movements in exchange rates may have an effect on the value of that investment.

Operational risk: The Fund is exposed to the risk of bankruptcy of those that act on behalf of the Fund or hold assets on behalf of the Fund. Investors should also note that compensation under the UK Financial Services Compensation Scheme and the Irish Investor Compensation Scheme will also not be available in relation to the Fund.
