# Performance highlights – Q4 2025

Q4 was another strong quarter for Index MPS, capping-off a calendar year which saw double digit returns across all risk-profiles. Our Gold holding was again the best performing allocation for the quarter, up 12.06% in Q4, and 53.60% for the year. All holdings within the range produced positive returns for the quarter, with UK and European equities leading the way, and the UK gilt allocation being the best performing position in the fixed interest element of the portfolio.

## Equities

UK and European Equities were the strongest performers in Q4, with the L&G UK Index Trust and the HSBC European Index Fund up 6.80% and 6.47% respectively. These were also among the best performing equity allocations for the year, with UK holding up 23.91% and the European fund up 26.71% during 2025. The Vanguard Emerging Markets Stock Index Fund was another strong performer, up 24.30% in 2025 after gaining 4.79% in Q4. It was also encouraging to see the value focused USB FTSE RAFI Developed 1000 perform well, up 5.94% for the quarter and 18.85% for the year, notably out-performing the market capitalisation weighted equivalent by more than 5% over the course of 2025.

While the US produced positive returns for the quarter and the calendar year, it notably lagged all other equity holdings within the range, with the Vanguard US Equity Index Fund up 2.39% in Q4 and 8.75%. Although this may be considered good performance on an absolute basis, in relative terms this is the worst calendar year performance when compared with MSCI All World ex US Index since 1993, an underscoring the importance of the geographical and style diversification within Index MPS.

## Bonds

All fixed interest positions were up during Q4 2025 and calendar year 2025, but with more modest returns than was seen on the equity portfolio, in line with what you would expect from the asset class.

During Q4, softer inflation prints and a kinder-than-expected budget saw a more positive outlook for the UK fiscal position which benefited our holding in the Vanguard UK Government Bond Index Fund, which was up 3.25% during the last three months of 2025.

For the calendar year, the best performing fixed interest position were the Amund US TIPS Government Inflation-Linked Bond UCITS ETF and the two short-dated corporate bond allocations, which were all up over 6% during 2025.

## Alternative Assets

Gold was again the best performing holding for the quarter, with the Invesco Physical Gold ETC up 12.06% in Q4, and 53.60% in 2025. This allocation continues to be an important diversifier in our portfolios as both an inflation hedge and given its low-correlation to the two main asset classes.

# Market commentary

## Q4 2025 Market review

Financial markets closed out 2025 on a strong note, continuing their positive momentum into year-end. Markets started the fourth quarter strongly but experienced a brief wobble due to uncertainty over Federal Reserve policy and delayed economic data following a protracted US government shutdown. Clarity restored confidence, allowing fundamentals to take centre stage. Equities gained on better-than-expected earnings across sectors, led by AI linked companies. Bond markets were bolstered by two rate cuts by the US Federal Reserve (50bps total) in the fourth quarter. Gold extended its rally, cementing itself as the standout asset class of the year, supported by structural demand from central banks and retail investors.

Source: LSEG Datastream/Evelyn Partners, data as at 31 December 2025. Global equities = MSCI ACWI and UK Equities = MSCI UK Index. Past performance is not a guide to future performance

After peaking in September, global inflation began to moderate, although core goods inflation remained affected by tariffs. Corporate earnings continued to exceed expectations, underscoring the resilience of the business sector. AI-related technology remained the leading growth driver, though questions about sustainability persist. Signs of strain emerged in the US labour market, with downward revisions to non-farm payrolls suggesting a loss of momentum. Central banks now face a complex backdrop of slowing growth and inflation remaining elevated, above the central bank target of 2%. Despite these challenges, investors have remained forward-looking, supported by resilient consumer demand & corporate adaptability.

**Bonds** ended the year on a positive note as inflation worries continued to dissipate. UK Gilts rallied after the Autumn Budget and expectations of further easing, while US Treasuries were broadly flat as the Fed cut rates twice as anticipated. Eurozone sovereigns held steady as the ECB kept rates unchanged. Credit spreads tightened modestly, with investment-grade outperforming high yield amid rotation to quality.

# Market commentary (continued)

**UK equities** ended the year near multi-year highs, supported by corporates who benefitted from global revenue and financial stocks, while domestic mid-caps lagged on softer growth. The Autumn Statement was digested smoothly, and sector leadership broadened late in the quarter, helping the market finish on a high note,

**European equities** delivered a steady performance over the period A key boost came from the newly agreed US–EU trade deal, which helped ease tensions and improved clarity for businesses. Companies across the region showed resilience, navigating cost pressures and supply chain shifts with relative success. The European Central Bank paused its rate-cutting cycle, reflecting firmer growth and inflation trends.

**Emerging market equities** had a strong period. Investor sentiment was buoyed as the US-China trade truce helped ease geopolitical tensions and improve visibility for global supply chains. The region also benefited from a weaker US dollar and resurgence in enthusiasm around artificial intelligence, with emerging markets increasingly recognised as key contributors in areas such as semiconductor manufacturing, data infrastructure and innovation.

**Gold** continued to shine, with the price reaching new all-time highs over the year. It has been supported by a weaker dollar and strong central bank buying, with investors seeking safety amid concerns over a US economic slowdown and inflation.

## Market outlook

2025 was a year of market resilience amid recalibrated economic expectations. Inflation has re-emerged, yet growth is supported by strong corporate performance and steady consumer demand. Looking ahead, positive fundamentals should outweigh headwinds from trade policies and geopolitics. In this context, the case for multi-asset investing has strengthened. Global markets continue to offer long-term growth opportunities, but with uncertainty elevated, high-quality bonds and gold provide valuable ballast, helping to smooth returns, preserve capital and hedge against risks. We continue to favour a flexible, forward-looking approach.

Asset class returns (%) to 31 December 2025	3 months	12 months

# Stock stories

Invesco Physical Gold ETC	This Exchange-Traded Commodity (ETC) is fully physically backed by gold bars stored in J P Morgan's vault in London. All bars held by the ETC were minted post-2012 meaning they adhere to the LBMA Responsible Gold Guidance in compliance with the highest ethical standards. It was set up to combat systematic or widespread abuses of human rights, to avoid contributing to conflict, to comply with high standards of anti-money laundering, and to combat terrorist financing practices in entire gold supply chain. This ETC has an OCF of 0.12%.
UBS FTSE RAFI Developed 1000	This fund that tracks the FTSE RAFI Developed 1000 Index. The index is composed of 1,000 large, mid, and small-cap companies across developed markets and uses a fundamental weighting methodology based on factors such as dividends, free cash flow, sales, and book value. Crucially, this ignores the company share price or market capitalisation, which is the weighting methodology of most indices, and as a result this fund provide exposure to the Value style, whereas other indices can skew more towards the Growth part of the market. This fund is a useful allocation in helping us achieve a well diversified portfolio across different styles.
HSBC European Index	The HSBC European Index Fund aims to track the performance of the FTSE Developed Europe ex-UK Index, providing broad exposure to large and mid-cap companies across developed European markets (excluding the UK). The three largest countries are France, Switzerland and Germany and from a sector perspective Financials, Industrials and Heath Care make up the largest part of the index. This fund is offered for a low OCF of 0.06%.
L&G UK Index Trust	The L&G UK Index Trust tracks the FTSE All Share Index for a low costs of 0.05%. While the index invests in the biggest companies listed on the UK stock exchange, these companies are global in nature and derive their income from all over the world. The index is also made of or traditional sectors such as Financials, Industrials and Energy which skew the allocation more toward the Value style, which can offset some of the Growth biases seen in other market-cap weighted indices, particularly US indices and Global exposure with a high weightings to the US. The FTSE All Share Index is quite concentrated, with over 40% of the index in the top 10 largest companies, which in part explains why we look to combine this exposure with an allocation to the UK mid-cap space to bring greater diversification to the portfolio overall.
Vanguard Emerging Market Stock Index	This fund tracks the MSCI Emerging Markets Index and provides exposure to c. 1,200 companies across 24 countries. China is the biggest single country allocation at around 30% of the index, but there is also significant exposure to Taiwan, India and South Korea. It is interesting to note that MSCI includes South Korea in its emerging markets classification whereas FTSE classify the country as a developed market, highlighting the importance of careful index selection in portfolio construction. We have access to an institutionally priced share class of this fund, which has an OCF of 0.16%.

# Cautious Portfolio Profile

## Risk Profile & Objective

The Cautious Model aims to deliver a real return ahead of cash per annum over the long term.

The Cautious Portfolio is appropriate for an investor with a four-year time horizon or more, is comfortable with low volatility of returns and having typically around 40% of their portfolio in equities and who is able to tolerate a loss of up to 12.5% of the value of their portfolio in any one year, based on the assumption of 95% probability. It is anticipated that a substantial proportion of the total return will come from income.

## Performance Since Launch\*\*

## 12 Months Rolling Performance

1 year to the end of:	Dec 25	Dec 24	Dec 23
Cautious Model	12.2	8.5	7.5
UK CPI + 1.5%	4.4	4.1	5.4
ARC Balanced Asset PCI *	8.7	6.4	5.8

Past performance, or any yields quoted, should never be considered a reliable indicator of future returns.

All data is at 31 December 2025 and rounded to the nearest 0.1%. \*This benchmark has been displayed for comparative purposes only and is not a benchmark for the Model.
